

## **EX. 7: User, Roles and Permissions**

**Name:** Subhalakshmi M

**Register No.:** 240701539

### **AIM**

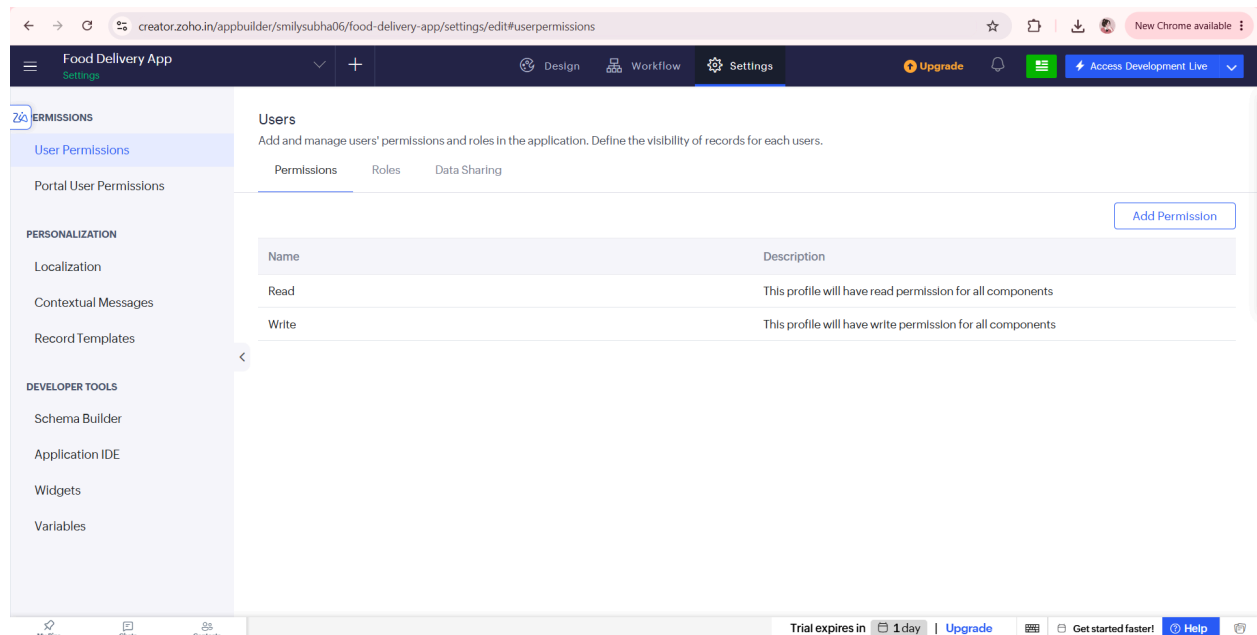

To create different user roles and assign suitable permissions in Zoho Creator to control access to the Student Study Planner application.

### **PROCEDURE**

1. Open the Student Study Planner application in Zoho Creator.
2. Navigate to the Users and Permissions section.
3. Create suitable roles for different types of users.
4. Assign required permissions to each role.
5. Add users to the application and assign the appropriate roles.
6. Verify the assigned permissions by checking the application access for different users.

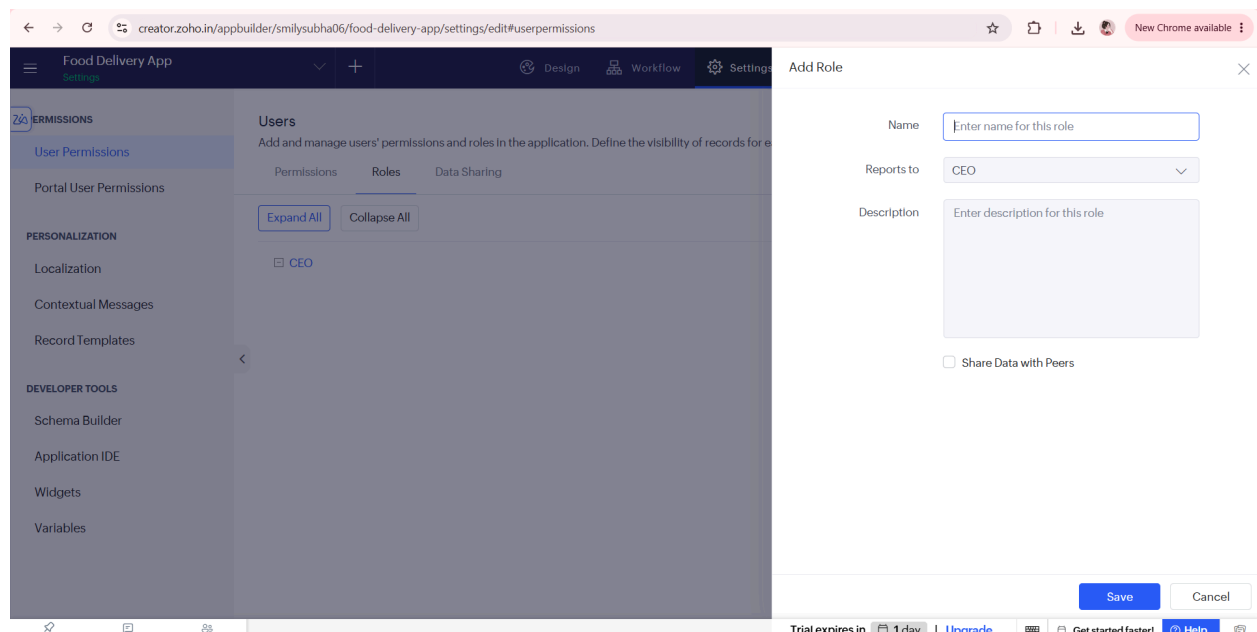

# OUTPUT

## 1. User Roles and Permissions

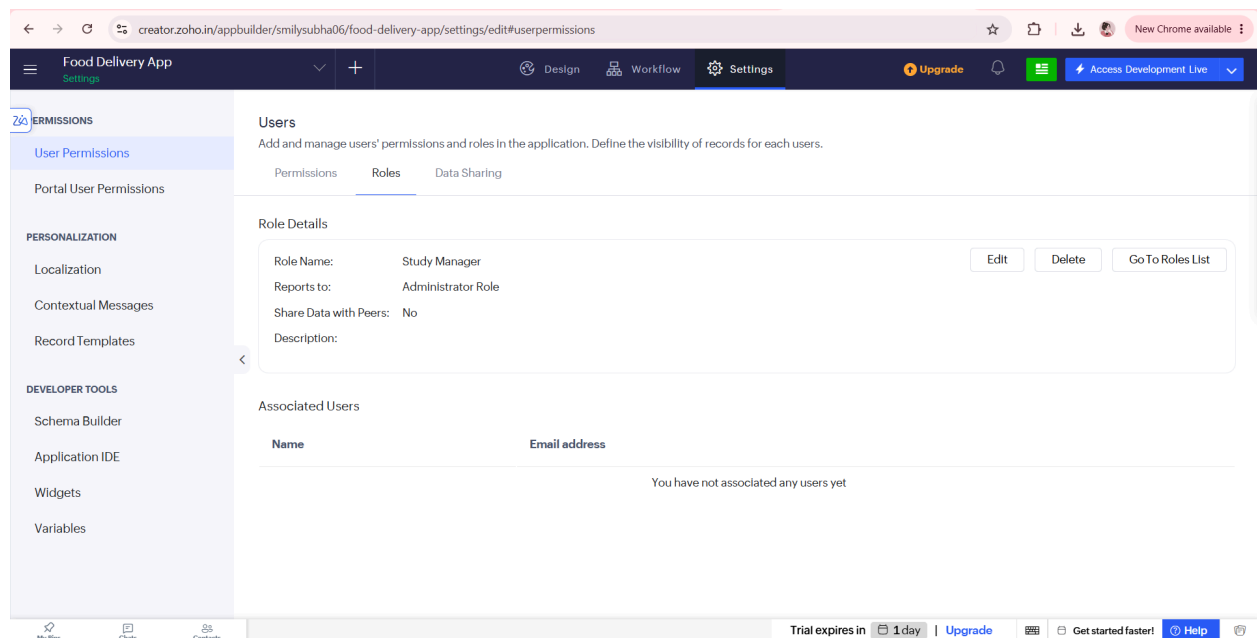

The Users and Permissions section displays the available roles and users configured for the application. Different roles can be assigned to control access to the application components.

## 2. Administrator Role

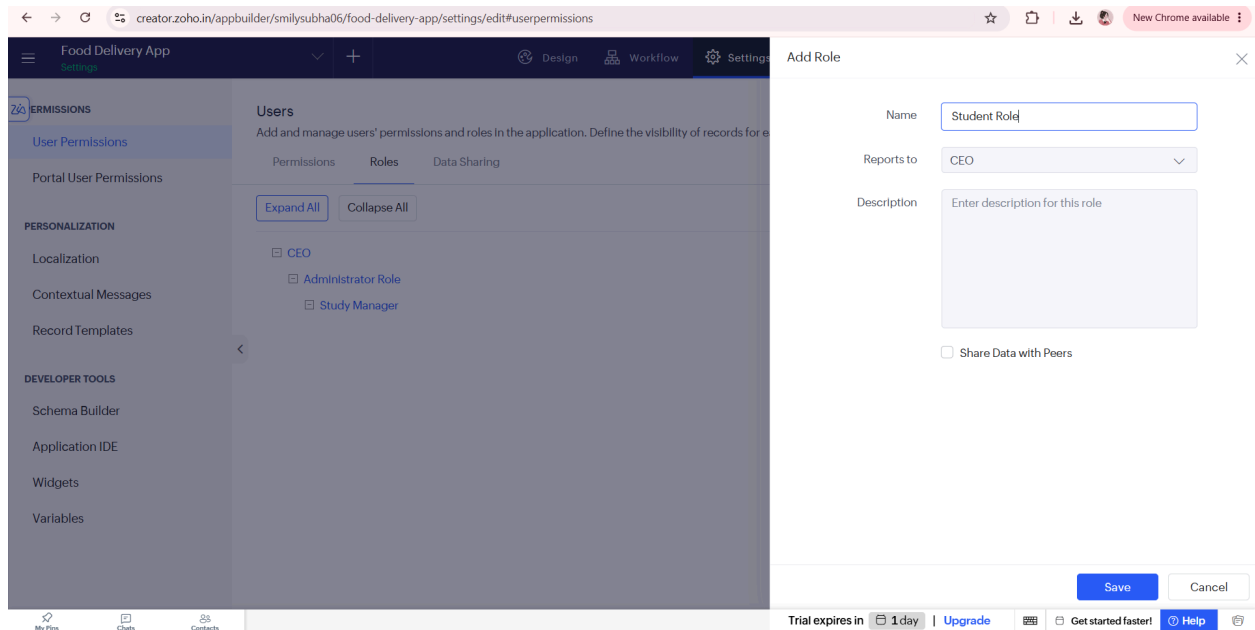

The Administrator role is configured with permissions to manage the Student Study Planner application and its components.

### 3. Study Manager Role

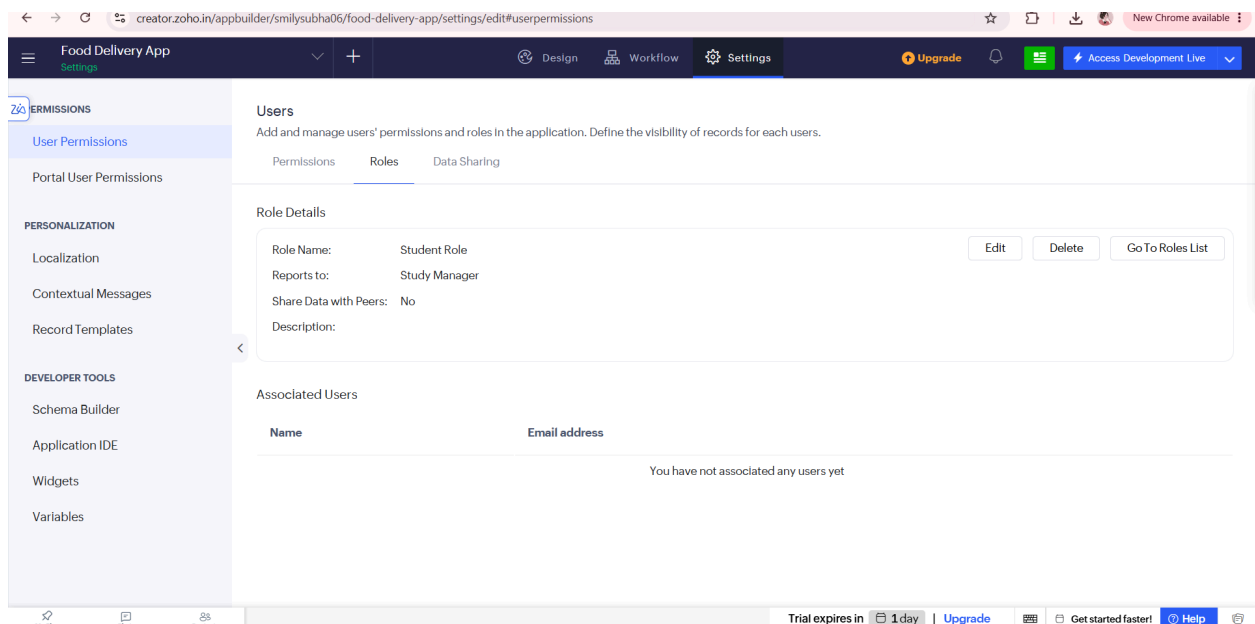

The Study Manager role is assigned permissions to manage study-related records such as tasks, notes, flashcards and study sessions.

## 4. Student Role

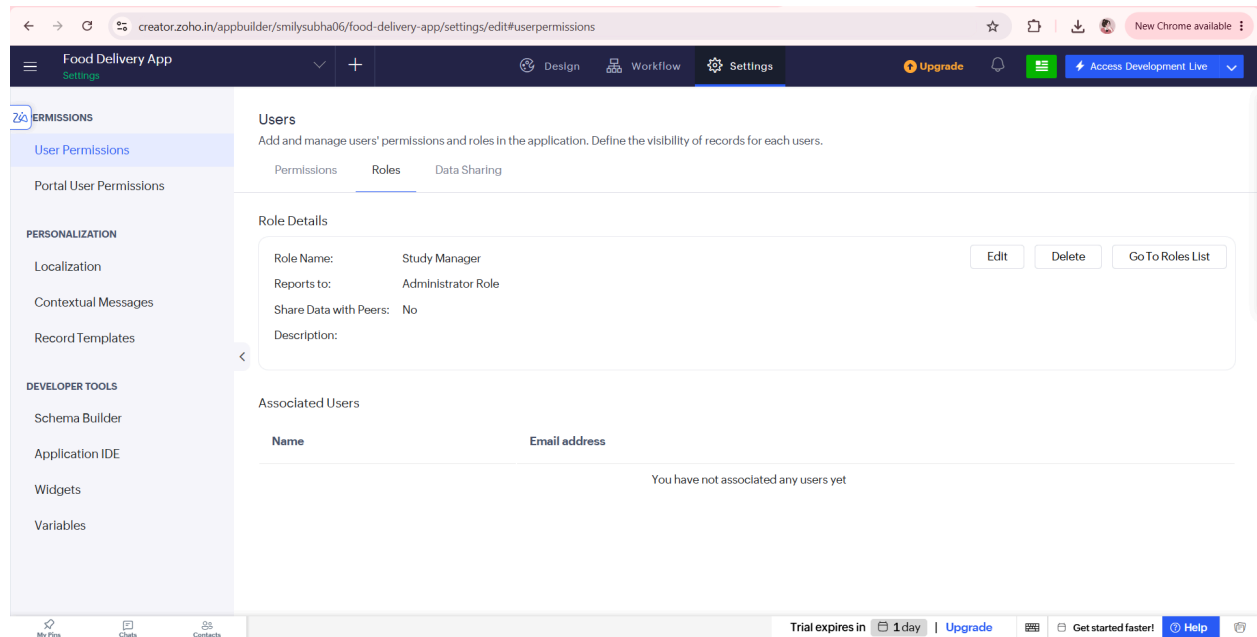

The Student role is provided with the required access to view and work with study-related information in the application.

## 5. Study Assistant Role and Permission Set

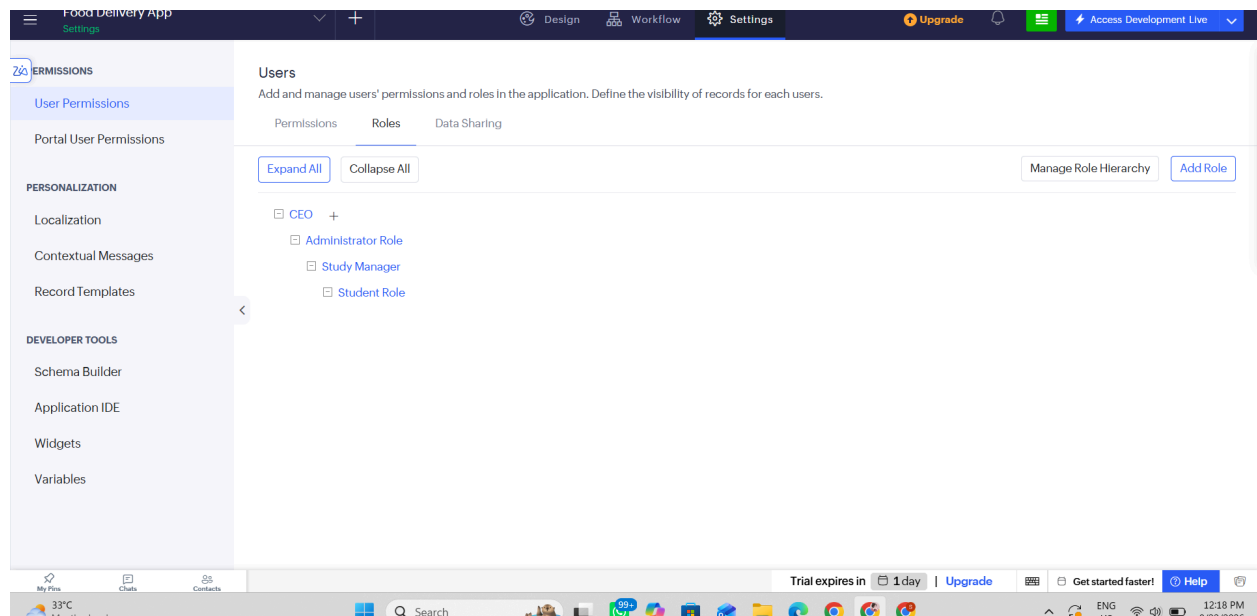

A Study Assistant role is configured for handling selected study-related records. A suitable permission set is also created by selecting the required access for the application components.

## 6. Study Manager Permission and User Assignment

The Study Manager permission set is configured with access to selected application modules. A user is then added to the application and assigned the appropriate role and permission set.

## 7. User List

The Users section displays the users added to the application along with their email addresses and account status.

## **RESULT**

Thus, different user roles and permission sets were created and assigned successfully in Zoho Creator for the Student Study Planner application, allowing application access to be managed according to the user's role.
