LAB EXERCISE 1

STUDENT STUDY PLANNER

Basic Fields Use Case

1. Objective

To document the Student Study Planner built in Zoho Creator, showing how study tasks, task status, priority, dashboard summaries and report views can be used to organize study activities.

2. Problem Statement

Students may find it difficult to manage revision tasks, deadlines and priorities in one place. The Student Study Planner brings study tasks into a structured application and provides a dashboard and reports to help review task progress.

3. Scope of the Use Case

Application Name	Student Study Planner
Main Form	Study Tasks
Report	Study Tasks Report
Additional Views	Dashboard and Board
Primary User	Student
Purpose	Create, review and track study tasks by due date, priority and status.

4. Fields Used in the Study Tasks Form

The live form shown in the supplied screenshots contains the following fields. System-generated and relationship fields are retained as they appear in the application.

Field	Purpose / Use
Title	Name of the study task; required field.
Description	Short explanation of the work to be completed.
Due Date	Deadline for completing the task.
Priority	Categorizes urgency: Low, Medium, High or Critical.
Status	Tracks progress, such as Not Started, In Progress, Completed or Postponed.
Created At / Updated At	Records creation and update timestamps.
User	Associates the task with a user record.
Board Task	Supports the Board view for organizing tasks.

5. Dashboard and Report Views

The dashboard screenshot shows summary cards for average ease factor, total study tasks, strategy usage and Pomodoro sessions. It also presents a status summary, quick links, and charts for focus level by duration and category by recommended duration.

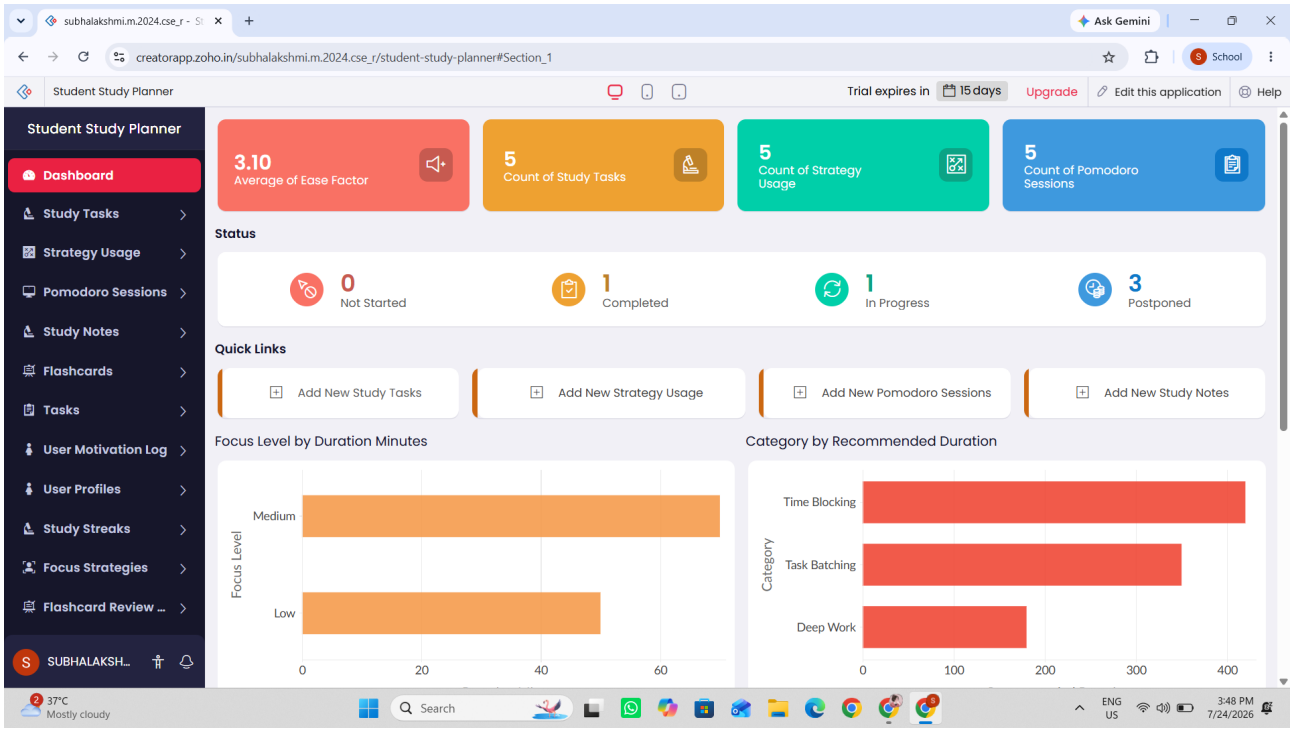

Figure 1: Actual Student Study Planner dashboard from the supplied Zoho Creator screenshots.

The Study Tasks Report displays the task records in a table with Task ID, Title, Description, Due Date, Priority, Status and timestamps. The supplied report contains five sample task records.

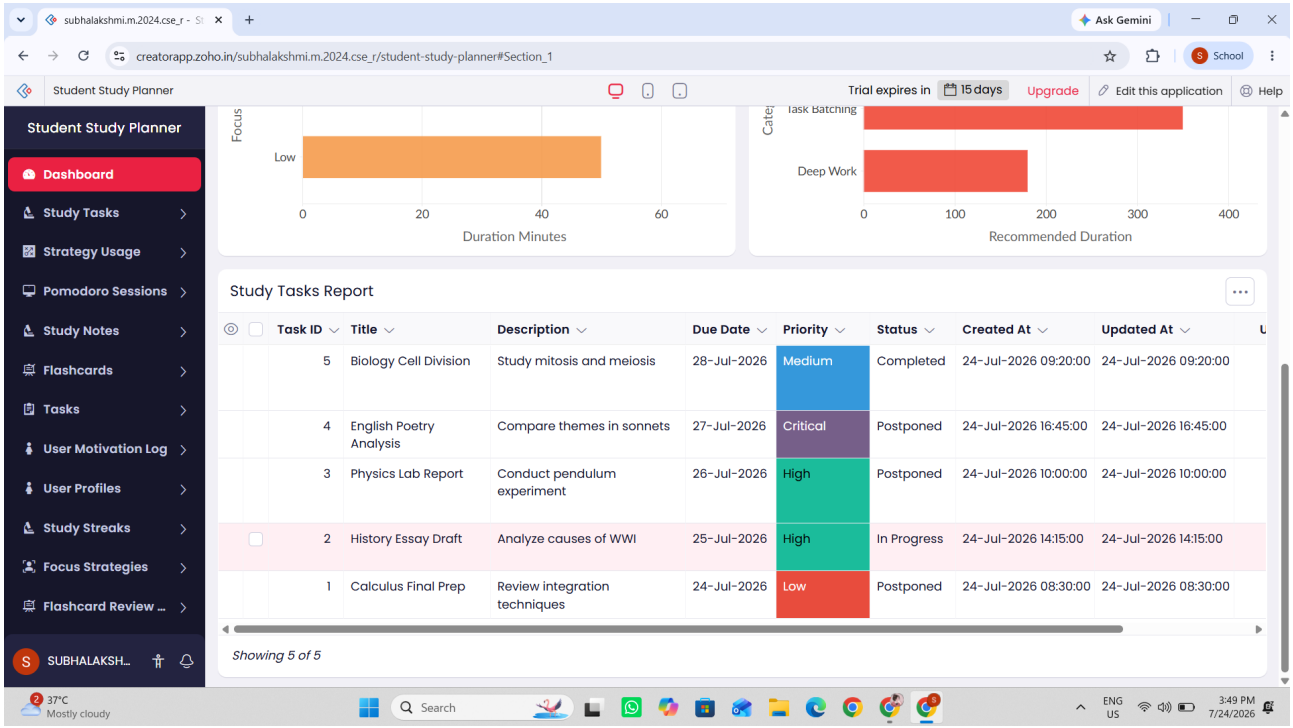

Figure 2: Actual Study Tasks Report showing five records.

6. Record Details and Form Layout

The record overview shows the selected task's title, description, due date, priority and status, along with its associated user details. This allows a user to inspect a record beyond the columns visible in the report.

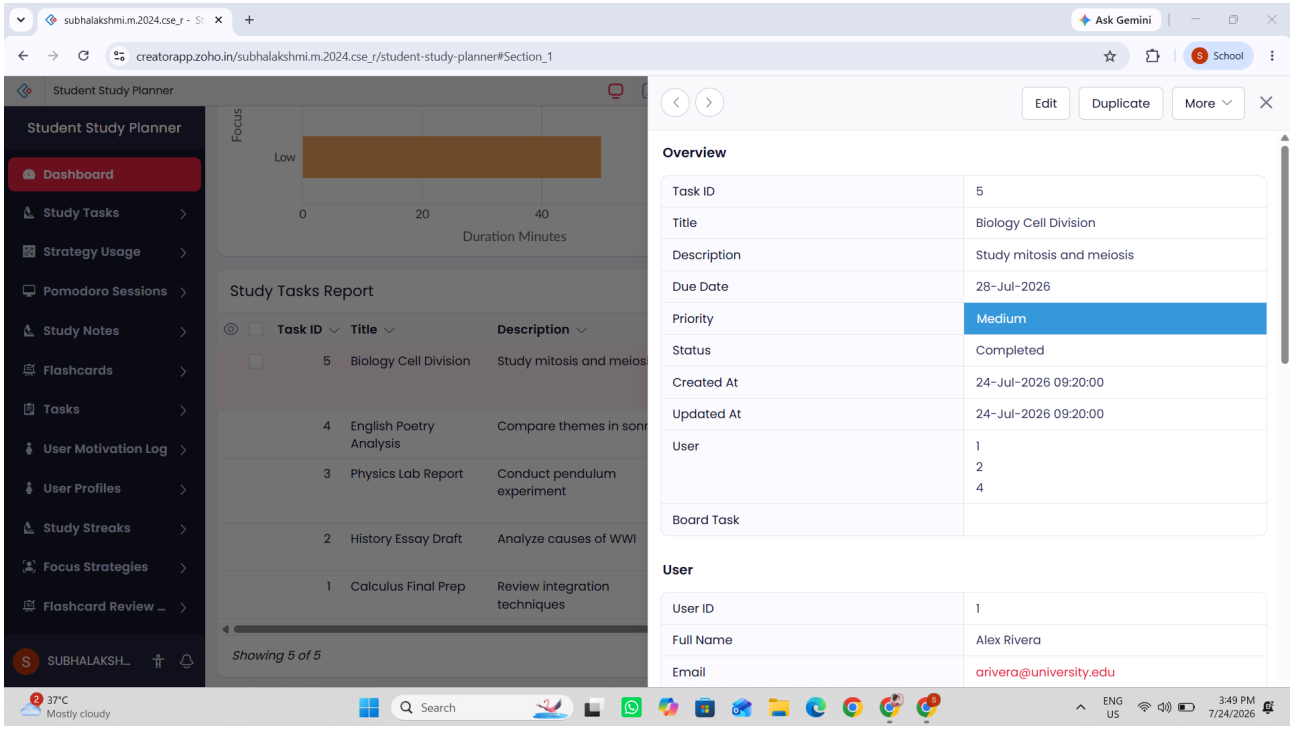

Figure 3: Record overview for the selected study task.

The user section in the record details displays profile information such as user ID, full name, email, preferred theme, creation time, last login and timezone for linked user records.

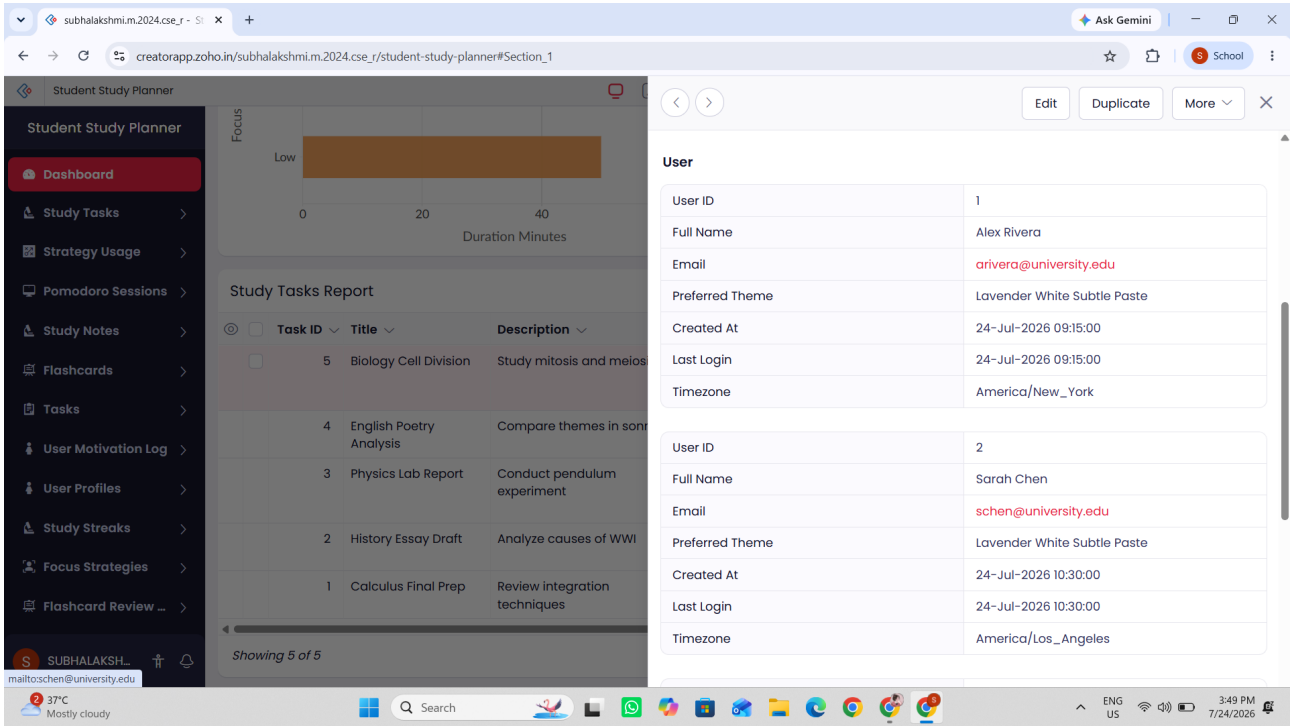

Figure 4: Linked user profile information in the record details.

The Study Tasks form is used to create a task by entering its title, description, due date, priority and status. The screenshots also show system and relationship fields, including Created At, Updated At, User and Board Task.

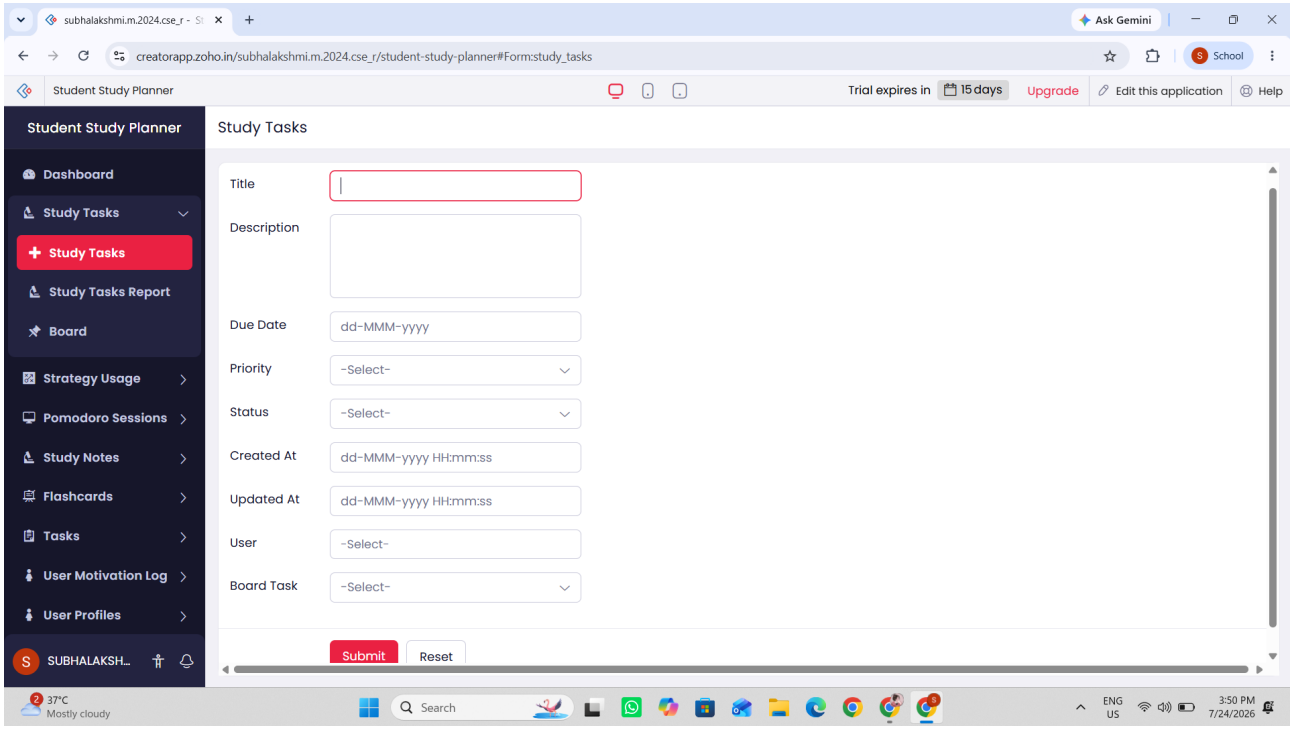

Figure 5: Study Tasks entry form in the live application.

The report view can be opened separately from the left navigation. The screenshot below shows the table layout and the available records in Study Tasks Report.

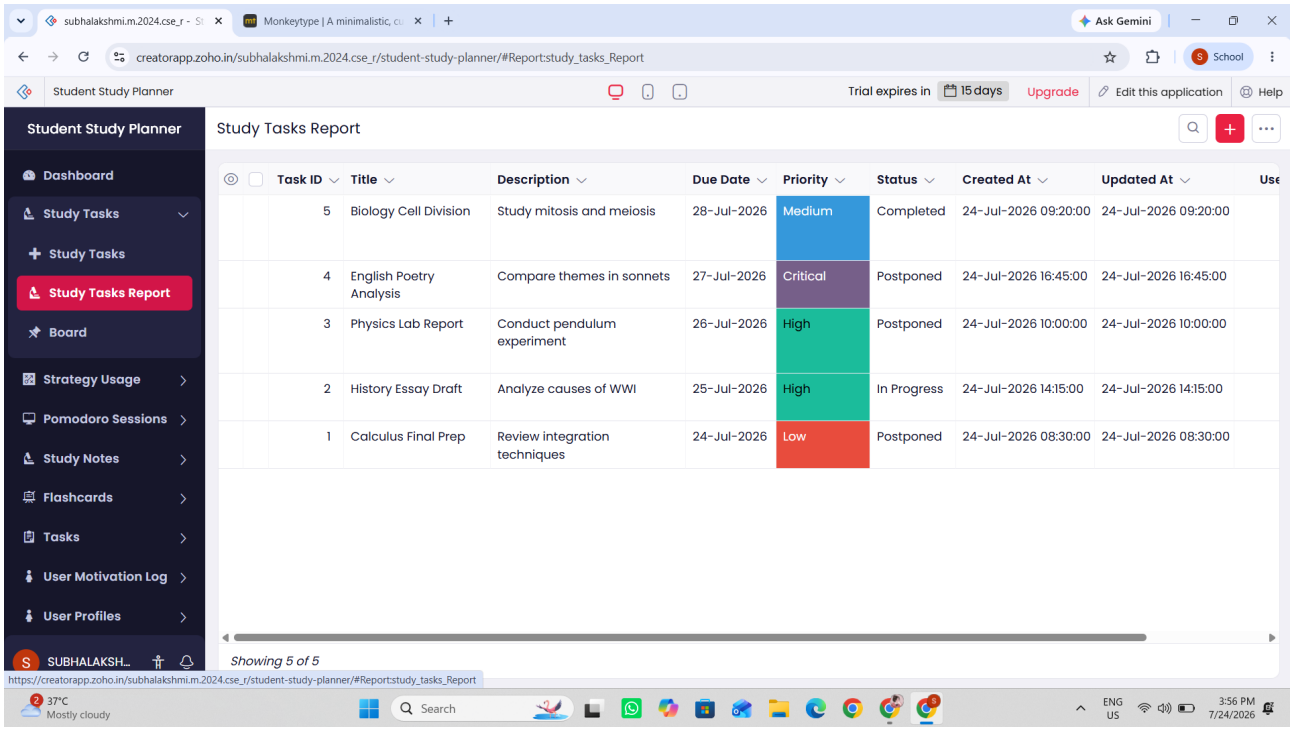

Figure 6: Study Tasks Report in the live application.

7. Board View

The Board view organizes study tasks into columns based on priority. Each card shows a task title and its task ID, providing a visual way to scan tasks by urgency.

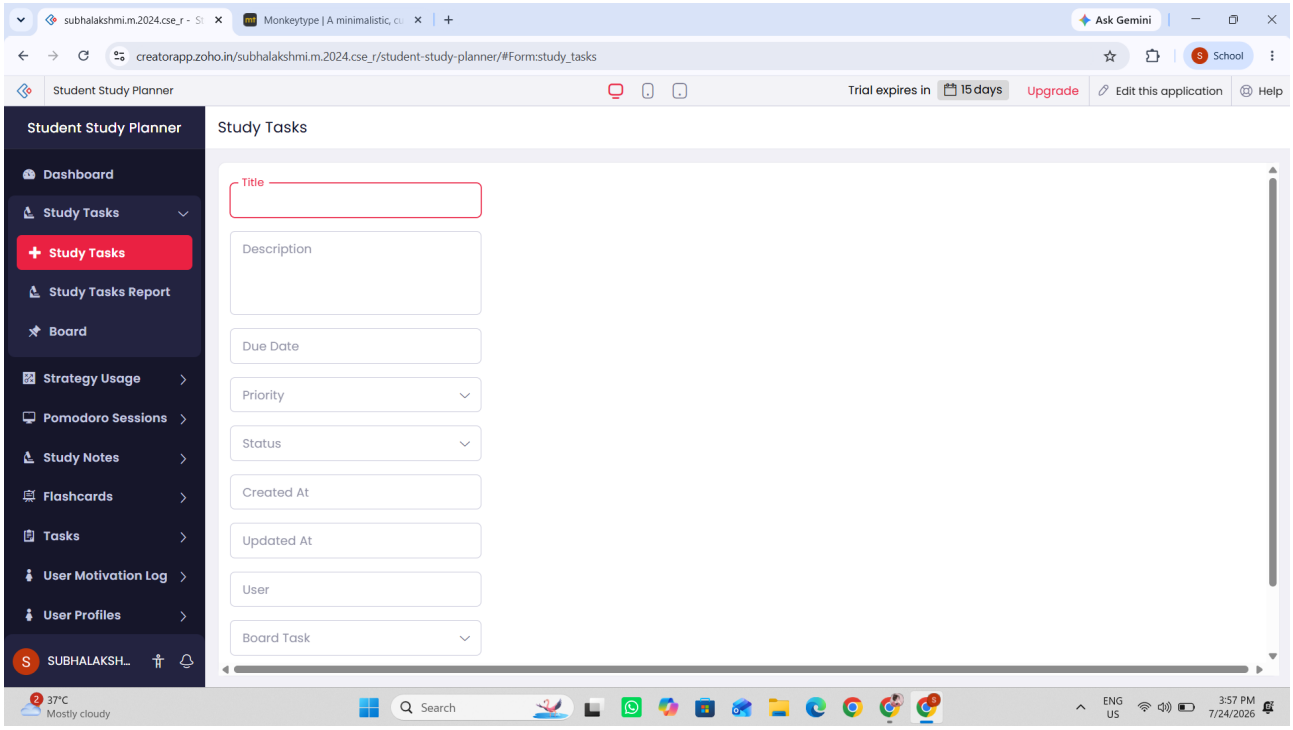

Figure 7: Board view grouped by task priority.

8. Validation and Usage Notes

• Title is shown as a required field in the supplied form screenshot.
• Due Date, Priority and Status are available to record the deadline and progress.
• Priority and Status use selectable values, helping maintain consistent task categories.
• Created At and Updated At provide timestamps for tracking changes.
• User and Board Task link the task to related application records and the Board view.

9. Workflow Summary

1. Open the Study Tasks form from the application navigation.
2. Enter the task title and description.
3. Select a due date, priority and status.
4. Submit the form to create a task record.
5. Review saved records in Study Tasks Report.
6. Use the Board view to scan tasks by priority and the dashboard to review high-level summaries.

10. Expected Learning Outcomes

• Build and use a structured form in Zoho Creator.
• View submitted records in a report.
• Understand how priority and status fields help categorize study tasks.
• Use dashboard cards and charts to summarize application data.
• Use a Board view for a visual task overview.

11. Result

The Student Study Planner application was documented using the supplied screenshots from the live Zoho Creator app. The report includes the Study Tasks form, Study Tasks Report, dashboard, record details and Board view to demonstrate how the application supports recording and reviewing study tasks.

Note: Screenshots in this report were supplied by the student and show the application interface and sample records at the time of capture.
